- 1) **CB007** 5 m. 13-Pin Extension Cable
- 3) **CB011** 1m Camera cable (may be required depending on placement of DVR)

* indicates parts used on trailer

Installation of DVR:

The front of the DVR needs to be in line with the (IR)remote during programming. To simplify the installation of DVR, we recommend connecting the DVR directly to the coil cable socket. This greatly reduces the number of cables run through the cab/dash/headliner. Plus mounting the DVR to the back inside wall of the day cab makes the DVR "out-of-sight-out-of-mind". It is the best place we have found working with fleets. Be sure not to drill through the outer skin during this installation. The DVR can be mounted vertically and horizontally.

For a retro install, consider optional DCTKIT install kit

- 1) socket for cab
- 1) socket for trailer
